DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Cotichini et al. (6,300,863).

Regarding claims 1, 9 and 15 Cotichini discloses a method, a system and a program product for tracing an electronic device transmitting identifying indicia over a global network, the electronic device connectable to a network server through the global network (see Figs. 1 and 7B), the method comprising the steps of: determining identifying indicia for the electronic device that are transmitted by the electronic device during communications over the global network (see col. 10, lines 15-26, col. 11, lines 32-50), automatically monitoring communications over the global network to identify

data transmitted through the global network to identify data transmitted through the global network that contains the identifying indicia (see col. 11, line 65 to col. 12, line 4), and upon identification of data transmitted through the global network that contains the identifying indicia, determining the location of the electronic device by tracing the source of the identifying indicia within the global network (see col. 12, lines 4-18).

Regarding claims 2, 10, and 16 Contichini further discloses wherein the global network includes Internet (see Internet application, col. 11, lines 32-32-34).

Regarding claims 3, 11, and 17 Contichini further discloses determining the identifying indicia by extracting the identifying indicia from data previously transmitted by the electronic device and stored on the global network (see col. 11, lines 51-64).

Regarding claims 4, 12, and 18, Contichini further discloses wherein the indicia is the MAC address of the electronic device (see col. 16, lines 37-42).

Regarding claims 5 and 13, Contichini further discloses wherein the identifying indicia is determined by indexing a known host name or IP address of the electronic device contained within data previously transmitted by the electronic device and stored on the global network (see col. 11, lines 51-64).

Regarding claim 6, Contichini further discloses providing the network server with one or more global network communication links used to enable transmission between the electronic device and the network server, wherein the transmission via the communication links is used for determining the location of the electronic device (see col. 16, lines 53-65).

Art Unit: 2686

Regarding claims 7, 14 and 19 Contichini further discloses entering the identifying indicia into a database stored in the network server and performing a matching function on the network server that compares the data transmitted over the global network with the database to identify transmitted data containing the identifying indicia (see col. 26, lines 48-62).

Regarding claims 8 and 20, Contichini further discloses that upon identification of data transmitted through the global network that contains the identifying indicia, notifying a responsible party that data transmitted through the global network contains the identifying indicia (see col. 27, lines 8-34).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Koodli (6,571,095) discloses a system for providing address discovery of services in mobile networks.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles Appiah whose telephone number is 703 305-4772. The examiner can normally be reached on M-F 7:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marsha Banks-Harold can be reached on 703 305-4379. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
